FOREWORD

The 18th All India Livestock Census covering poultry as well as agriculture implements, machinery and fishery statistics conducted in the state of West Bengal was completed in scheduled time by the Directorate of Animal Resources and Animal Health, Government of West Bengal, with 15th October 2007 as reference date.

This report has been prepared to be very effective with rural/urban as well as mouza/parawise elaborate breakups for each district. Moreover the introduction of a Geographical Information System (GIS) since last census year with digital mapping of livestock data at mouza, G.P., Block, Sub-Division (Rural) and District (Rural) level for rural areas and ward, Municipal area, Sub Division (Urban) and District (Urban) level for urban area has added new dimension to the livestock census of our state.

In this connection I greatly appreciate the well coordinated team work of Dr. P. K. Bhattacharjee, Joint Director of Animal Husbandry (Statistics) as well as Additional State Livestock Census Officer, Shri T. R. Nath, Statistical Officer and Deputy State Livestock Census Officer, 18th Livestock Census, along with other Officers and Staff of the Animal Resources Development Department in making the 18th Livestock Census a successful one.

Like previous years this census report will be most utilized in formulating different welfare plans and schemes for the state as well as in various relevant research projects.

PREFACE

The final report of the 18th All India Livestock Census for the state of West Bengal with reference date 15th October 2007, has been successfully prepared within due time. This vast well compiled report with district-wise mouza/para level data consists of updated basic data on livestock and poultry population, agriculture implements and machinery, fisheries and livestock and fishery infrastructure.

The team of officers whose hard work and co-operation has been indispensable for the timely completion of census work and publication of the report are Dr. P. K. Bhattacharjee, Joint Director of Animal Husbandry (Statistics) and Shri T. R. Nath, Statistical Officer and Deputy State Livestock Census Officer, 18th Livestock Census, along with innumerable district and state-level Livestock Census Officers and Staff.

The information provided in the report will prove very useful to all those who use animal husbandry related data in their respective work areas.

INTRODUCTION

The Directorate of Animal Resources and Animal Health, Government of West Bengal in co-ordination with Government of India, Department of Animal Husbandry, Dairying and Fisheries, has completed the 18th All India Livestock Census in the state of West Bengal in due time. Apart from enumeration, supervision, compilation and tabulation, this huge census work also involves publication of both hard and soft copies of the report.

Dr. P. K. Bhattacharjee, Joint Director of Animal Husbandry (Statistics) and Additional State Livestock Census Officer, 18th Livestock Census, West Bengal, Shri T.R. Nath, Statistical Officer and Deputy State Livestock Census Officer, 18th Livestock Census, West Bengal and many other Officers and Staff of this directorate have efficiently shouldered the responsibility of completing the census work with perfection.

Planners as well as all people working in animal resources and associated sectors will be amply benefitted from the useful findings of this elaborate census work.

TECHNICAL ASPECTS OF THE 18TH LIVESTOCK CENSUS

The total count of livestock population and its composition is available from the livestock census, which is the most important single source of data. The Department of Animal Husbandry, Dairying and Fisheries, Ministry of Agriculture, Government of India, conducted the 18th Livestock Census with reference date 15th October 2007. The census operations are carried out in different States and Union Territories by the respective State Governments. Undoubtedly an expensive statistical exercise this census it is indispensable for understanding the demographic structure of our livestock so as to be properly equipped to carry out livestock improvement programmes in the country. The livestock census covers not only livestock but includes information on fisheries and agricultural implements and machinery.

In 1919-20, the first livestock census of cattle was conducted. The subsequent censuses were conducted at intervals of five years. 18 such livestock censuses have been completed till now.

In the 18th Livestock Census, breed-wise data of indigenous cattle, buffalo, sheep, goat, pig and fowl was collected for the first time in the State of West Bengal. In the present report the cross-bred and indigenous cattle have been clubbed together as in the earlier reports for comparability with the past.

Canvassed schedule of enquiry in each household obtains information on 512 items for each household. In addition, information on another 127 items on livestock and fishery infrastructure and commercial poultry birds stock is collected for each mouza, ward and each commercial poultry farm. Field workers undertake house-to-house enumeration to ascertain stock of livestock, agricultural implements and machinery, fishing craft and tackle (as well as number of persons engaged in fishing and ancillary activities), etc., possessed by households and institutions. The field work is mainly conducted by primary workers, consisting of staff drawn from the Animal Resources Development Department and Prani Bandhu personnel¹.

State level training of trainers was arranged at Barasat, in the district of North 24 Parganas. A manual of instructions was circulated to all districts. State level Livestock Census Officers and Headquarters Officers of the Statistical Cell also trained the block/municipality/sub-division Livestock Census Officers. The trained officers in turn trained the enumerators in the field work. A tabulation manual was prepared and sent to all districts to obtain the data in tabulated form.

Livestock, Poultry, Agricultural Implements and Machinery, and Fisheries are the four main parts of the Livestock Census. As these four parts involve a huge amount of data compilation, appropriate software called LCMS (Livestock Census Management System) has been developed. In West Bengal, Geographical Information System (GIS) has been developed for digital mapping of livestock data at all levels for each district. The systematic data base prepared in the 18th Livestock Census goes down to the level of mouza/para. The district profile includes pictorial graphs and the write-up gives a comprehensive account of the State's livestock position.

¹ Educated unemployed youths trained in livestock care by Paschim Banga Go-sampad Bikash Sanstha, a Govt. of West Bengal organisation

I would like to place on record my deep appreciation for Sri Anisur Rahaman, Hon'ble Minister-in-Charge, Animal Resources Development Department, Sri D.K. Chakraborty, IAS, Principal Secretary to the Government of West Bengal, Animal Resources Development Department and Dr. K. Saha, Director of Animal Husbandry and Veterinary Services, Directorate of Animal Resources and Animal Health for their constant encouragement in compilation of the Report on the 18th Livestock Census. Their valuable suggestions have greatly contributed to the successful completion of the Livestock Census.

We are thankful to Dr. D.K. Das, Chief Executive Officer, Paschim Banga Go-sampad Bikash Sanstha, for his encouragement in the engagement of Prambandhus in the enumeration work.

This report has received immense help and cooperation from all officers and staff of the Animal Resources Development Department. I wish to express my sincere appreciation to all of them for their whole-hearted support.

The preparation of the report has been made possible primarily due to the keen interest of Sri Tushar Ranjan Nath, Statistical Officer and Deputy State Livestock Census Officer, 18th Livestock Census, West Bengal who worked very sincerely and with great zeal in achieving the target of releasing the results in the shortest possible time. Sri Nath developed the aspects of computerization, digital mapping and analytical work, and prepared the district profiles with the Assistance of Dr. Arindam Kundu, Statistical Officer and Assistant State Livestock Census Officer, Smt. Supriya Roy, Bengali Translator and Assistant Livestock Census Officer (Publicity) of this Directorate has also worked hard to make possible the elaborate and informative introductory write up on each of the nineteen districts and for the state of West Bengal as a whole. I also acknowledge the contribution made by other officers and staff of the Statistical Cell in bringing out the results in a very short time.

The statistical help received from the Bureau of Applied Economics and Statistics, Government of West Bengal, Department of Animal Husbandry, Dairying and Fisheries, Ministry of Agriculture, Government of India and other different organisations/institutions for various analytical parts of the Report is thankfully acknowledged.

The management of Silpabarta Printing Press Ltd. (a Government of West Bengal Undertaking) and workers deserve appreciation for their untiring cooperation in printing of books and computerized tabulation.

I am sure that scientists, researchers, policy planners and livestock data experts will benefit immensely from the information contained in this publication. We look forward to suggestions and comments on the information contained in this publication, which will be valuable for our future publications.

MESSAGE

I am happy to know that Directorate of Animal Husbandry & Veterinary Services, West Bengal is going to bring out a district-wise compiled book reflecting the comprehensive data of Livestock population.

The Livestock Census is one of the most important sources of total livestock population and the demographic structure of livestock only can carry out livestock improvement programmes in the country. The 18th All India Livestock Census for the State contains data starting from the Mouza level of different districts.

I believe that these findings would certainly help the research workers associated with livestock, poultry, agriculture and rural development including the directorate in formulating micro-level planning in the district.

04/03/09
(Manish Jain)

The Deputy Director,
Animal Resources Development &
Parishad Officer, Burdwan

Government of West Bengal
Office of the Deputy Director of A.R.D. & Parishad Officer, Bardhaman

Acknowledgement

"As a general rule, the most successful man in life is the man who has the best information."

Information is an integral part of any kind of micro-level planning. It is a basic tool of management and a key input for the progress of any society. Amongst all information systems, Census is that kind of system which provides demographic information, a frame of reference and baseline for planning, action and research in the entire governmental system.

Similarly, Livestock Census is indispensable for understanding the demographic structure of our livestock which enables us to carry out livestock improvement in the Country as well as the state.

'The present 18th All India Livestock Census, Agriculture implements and Machinery Fishery statistics for this district has been carried out as per the guideline of Government of India followed by coordination and sequential chain of activities right from enumeration, supervision, compilation and tabulation by the district in conformity with instructions by the date of A.R. & A.H, West Bengal from time to time.

It is thus opined that this report with detailed Mouza/ Parawise break up of livestock and related activities will be very useful in formulating different plans and schemes for this district which have varieties of livelihood Agriculture, Industries and mining, all at their peak,

I would like to thank all the personnel under district administration who have rendered yeomen('s) service in the process of realistic implementation of this census work,

I am really indebted to Dr. P. K. Bhattacharjee, Joint Director (Statistics) and Addl. State Livestock Census Officer, Sri T. R. Nath, Statistical Officer & Deputy State Census Officer and Dr. A. Kundu, Statistical Officer whose erudite guidance have always been a source of inspiration to us for shaping this Census work in right direction within a frame of time.

BARDHAMAN DISTRICT PROFILE

INTRODUCTION :

Bardhaman district situated on the western periphery of the state is the most advanced district in West Bengal both industrially and agriculturally. Located between the Ajoy & Bhagirathi (Hooghly) rivers, the tract is made up of highly fertile alluvial soil carried by those rivers and hence this area is most favourable for agriculture. The agricultural production, mainly rice, is so high that the district is called the Granary of Bengal. The eastern part of the district is one of the most productive agricultural regions in West Bengal. In post independence period, Bardhaman became an important economic hub in West Bengal because of its location and also due to the natural resources available in the state. The western part of the district chiefly Asansol is rich in coal and other mineral resources. Industrial township Durgapur is second almost to none. Mining, primarily for coal, is another activity in the district. It is amongst the first districts to have a 100% literacy rate.

LOCATION :

Bardhaman district extends from 22°56' to 23°53' north latitudes and from 86°48' to 88°25' east longitudes.

Lying within Bardhaman division, the district is bounded on the north by the Santal Parganas, Birbhum and Murshidabad, on the east by Nadia, on the south by Hooghly, Bankura and Purulia and on the west by Dhanbad districts. The river Barakar forms the State boundary to the west; the Ajoy separates Birbhum and Santal Parganas to the north with the exception of a portion of Katowa subdivision which lies to its left bank; the Damodar forms a natural southern boundary with Purulia and Bankura, while Bhagirathi forms the main eastern boundary.

The district with an area of 7024 km in the biggest district in the state. The total length of the district from the Barakar to the Bhagirathi below Kalna is 208 km. while its maximum breadth from north to south is only 112 km. In shape the district resembles a hammer, the handle of which consists of the Asansol and Durgapur subdivisions.

Population figure as per 2001 census is 6,895,514. It is the largest district both in terms of population and size. The district has six subdivisions, Asansol, Sadar (North), Sadar (South), Durgapur, Kalna and Katwa.

ORIGIN :

The history of Bardhaman is known from about 5000 BC and belonging to the Mesolithic or late Stone Age. The name Burdwan is an anglicized form of the Sanskrit word Vardhamana. The first epigraphic reference to the name occurs in a 6th century AD copper plate found in the village of Mallasarul in Galsi Police Station.

There are two views about the origin of the name Bardhaman. One is that it might have been named after the 24th Jaina Tirthankar or Bardhamanaswami. According to the Kalpasutra of the Jains, Mahavira spent sometime in Astikgrama which was formerly known as Bardhaman.

According to the other view, Bardhaman means prosperous growth centre. In the progress of aryanisation from the upper Ganges valley, the frontier colony was called Bardhaman as a landmark of growth and prosperity.

HISTORY:

The excavations of 1954 and 1957 revealed that the Mesolithic Age has been traced at Birbhanpur in Durgapur Thana. These discoveries are results of excavations carried on during 1962-65 at Pandu Rajar Dhibi in the valley of the river Ajoy (near Bhedia) and in several other sites on the Ajoy, Kunur and Kopai rivers. This Dhibi has revealed that the people of those days were capable of building well-planned towns

with pavements and streets. They lived in citadels and houses built of unfired clay reinforced with reeds and having plastered walls and floors of beaten peletty laterite. They knew the use of copper. Agriculture and trade was the mainstay of their economy.

Barddhaman continued to be a well-known division of the ancient Bengal. In the 6th century epigraphic evidence points to the existence of Bardhaman as a famous Bhukti and in the age it was also mentioned as Radhadesa or Radha. Radha Barddhaman area became a part of the Maurya empire and remained so throughout. But following the dissolution of the Gupta empire, one or more independent kingdoms were established in Bengal.

TOPOGRAPHY :

From a regional point of view the Bardhaman district with its varied tectonic elements and riverine features, is a transitional zone between the Bihar plateau which constitutes a portion of Peninsular Shield in the west and the Ganga-Brahmaputra alluvial plain in the north and east.

The western half of the district resembles a promontory jutting out from the hill ranges of Chotanagpur plateau and consists of barren, rocky and rolling country with a laterite soil rising into rocky hillocks. These diversify the otherwise monotonous landscape and lend a special charm to the skyline around Asansol subdivision.

The Ajoy-Barakar divide is a convex plateau, the average altitude being 150m. The Ajoy-Damodar inter-stream tract is made up of several stows consisting of vales and low convex spurs which run in almost all directions except north-west and thus lends a very complicated character to local relief.

The stow encompassed by the Damodar on the south, the Barakar on the west and the Nonia Khal a tributary of the Damodar to the east has the most pronounced relief within the Damodar-Ajoy divide. The Nonia Khal peculiarly turns non-perennial tributary a mile north-east of Asansol (86°59' E & 23°42' N), flows in a south-easterly direction. Towards the north, the industrial landscape completely overshadows the natural landscape. The entire area is dotted with collieries. From the air, the pit-heads with their steel structures, factory chimneys and burning heaps of coal, dense nodal settlements and an intricate mesh of communication lines amidst an almost treeless undulating surface with a few patches of terraced cultivation and numerous dried up tanks present a gloomy appearance. The settlement pattern is mixed - linear along the communication channels linking the mines and clustered around tanks on the cultivated fields.

The inter-stream areas of the Nonia Khal and Singaran Nala covering parts of Barabani, Jamuria, Raniganj and Andal police stations and extending from the Ajoy to the Damodar is the third stow. This area again is one of low undulating relief with radial drainage pattern and graded inter-stream tracts sloping down to broad valley floors. This incipient peneplain has retained some of the deep residual laterite and red clay soils which formed on the old-age surface. A line of artificial and natural tanks occur along this crest.

The northeastern edge of the Damodar-Ajoy interfluvial, dominated by the Tumuni and the Kunur Nadi, constitutes the fourth stow. The upper catchment area of the Kunur above 75 m. is covered by sal jungle. On the right bank of Ajoy at village Semalya (87°12' E & 23°45' N) there is a sand hill and several rock outcrops in the upper catchment area of the Tumuni and her tributary the Itakhala Nala. The height of the Tumuni-Ajoy interfluvial ranges between 60m. and 100m. while that of the Tumuni and Kunur between 60m. and 120m.

The southern half of Durgapur subdivision extends from the Singaran Nala on the west to the Anderson Weir (19 km. from Durgapur Barrage) and the upper catchment area of the east flowing Kharia Nala and the Banka. Clearance of dense forest around Durgapur and destruction else-where has brought the usual nemesis of erosion. Like its western counterparts in the Asansol subdivision, this broadly rolling country is partly covered by the older floodplain alluvium of the Damodar but the interstream uplands are bordered by low gullied terraces. On the valley-slopes terracing for paddy catches the soil wash; checking erosion and retaining sub-soil water. The cultural landscape of this stow is different from that of its western counterpart. Whereas

the landscape of Asansol subdivision is characterized by coal derricks with their attendant spoil heaps, the irregular and squalid settlements of the miners. The quaternary terrain around Bardhaman shows two common and distinct types of land forms, deltaic plains and valley plains. Clay, loam and sandy clay are the main soil types.

SOIL :

Different types of soils are encountered in different topographical biological and hydrological as well as geological conditions within the Bardhaman district. Alluvial soils are formed of the alluvium brought down by the Ajoy, Damodar, Bhagirathi and numerous other rivers. Marsh and Meadow soils occur along the marshy courses of the rivers and their tributaries wherever the drainage is impeded.

Though hardly a dozen minerals of economic importance occur in the Bardhaman district, it is one of the premier districts in India in terms of value of mineral production. The Raniganj coalfield and the surrounding Archaean and lateritic areas of Bardhaman is of great geological and mineralogical importance. The Raniganj coalfield, which although at present ranking second amongst the major coal producing regions in India, was the birth place of the Indian coal industry. Before the discovery of iron deposits of Singhbhum in Bihar, the deposits of iron ore in the Raniganj coalfield were thought to be the future source for the establishment of large scale iron industry in Bengal. Besides coal and iron, important minerals found in the district are fire clay, Raniganj clay silica, building materials, lime-stone, apatite, laterite, etc.

The resources of different varieties of rocks which are used for construction and civil engineering purposes are adequate in Bardhaman. Dolerite dykes and Rajmahal traps are good for use as road metal and railway ballast. Granites and gneisses, some of the Gondwana sandstones and sandstones of the Panchet and the Damuda series in the Raniganj coalfield yield good building materials. The hard sandstone bands in the Raniganj series, the calcareous sandstones in the lower portion of the Talchir series, and the beds at the top of the lower Damudas are good examples. The temples by the side of Barakar river are made up of these sandstones.

In Bardhaman, friable quartzites suitable for use as glass sands occur near Taldanga (87°06' E & 23°46' N) about 2.4 km from Churulia railway station. The clay based pottery, ceramic and allied industries of the district are well developed and occupy a premier position in India.

In Bardhaman, fire-clays occurring within the Raniganj Coal-field are more important than china-clay. Fire-clays occur as seams within the Barakar stage. Two types of iron ores, namely, (i) clay-ironstones of the Middle Damudas (Barren Measures) and (ii) lateritic ores of the eastern part of the Raniganj coalfield, were at one time an important source of the iron industry in Bengal.

The chief colliery areas in the Bardhaman district are at Ramnagar, Dishergarh, Salanpur, Asansol, Gaurangdi, Churulia, Charanpur, Kalipahari, Shibpur, Raniganj, Toposi, Kenda, Purushottampur, Ukhra and Kajora. Within the trans-Ajoy portion of the field lie the colliery groups of Poripur Kasta, Arang, Raswan and the Hingla.

AGRICULTURE :

"The granary of West Bengal", Bardhaman mainly accounts for the production & trade in rice. Rice is exported to the different districts within the state & even in the neighboring countries. Nearly all the varieties are produced in this region, which can be primarily classified into 3 types depending on the seasons they are cultivated - Aus or autumn, Aman or winter and boro or the summer rice. Though paddy covers the maximum of the gross cropped area, some cash crops like jute, potato, sugarcane and oilseeds are cultivated in the subsidiary areas.

Having an advantageous topographical feature, the region was developed as an agriculturally prosperous land from the primeval times. The implementation of the Damodar Valley Project in 1953 induced a scientific dimension to the standard of cultivation of the district.

The optimal rainfall with tropical humidity of Bardhaman is supportive for the cultivation of the horticulture crops, which covers a large number of fruits, flowers & vegetables. As these are perishable in nature, they required proper maintenance. The NCDC (National Co-operative Development Corporation) is trying to promote the standard of the horticulture by developing the post harvest infrastructure like cold storage, food processing, packaging & marketing which contribute a significant part to the district's economy.

INDUSTRY :

Embracing the Asansol & Durgapur subdivision, the wide belt of industry grows up. In spite of being a rural set up primarily, the industrial region of Bardhaman signifies an urbanized economy. The availability of infrastructure & favorable climate, led the economic planners to set up industries in Durgapur & Asansol including the adjoining areas. The traditional industrial base like coal, iron ore have undergone a rapid diversification and new industrial ventures, which include mainly heavy engineering, coal-based chemicals & coal-based thermal power plants are now growing up with equal importance of the customary iron and steel industries of the region. The Damodar Valley Project, at the same, time as supplementing the irrigation purpose, play a dominant role in the sustained programmes of hydroelectric power generation which induces the effective industrialization & modernization of the district.

The industrial products have great demand all over the districts & sufficient amount of profits is drawn from the export of these products even in abroad. The industrial area of Bardhaman was a principal site of investment of the foreign aid since the post independence period, which also helps, for the development of urbanized industry based economy.

Between 1955 to 1965, a series of large & small-scale industry grew up in Durgapur pivoting the Steel Plants in Durgapur.

(i) Durgapur Steel Plant: - Utilizing the British Technology, the plant first started the construction works in furnace and produces about 1 million tonne of steel. It was the primitive base of Iron & Steel industry in Bengal, which also accounts for large quantity of export.

(ii) Durgapur Alloy Steel Plant:-In 1965, Alloy Steel Plant, utilizing the Japanese investment of Rs.70 crores and Canadian know-how, came into existence, which produced the steel of its own kind. It exports the largest amount of alloy steel of the country till date.

The by product of steel production, naptha is an important base for fertilizer production which helps for the growth of Durgapur Fertilizer Project, which is the first plant of its own kind, maintained by FCI (Fertilizer Corporation of India) in West Bengal and sixth in the export of its products in the country.

Durgapur Projects Limited is an integrated whole of several plants - (i) Coke Oven with its by-products and tar distillation plants (ii) a thermal power plant, which not only serve the domestic needs but also support the country's economy to a large extent.

Moreover a gas line between Durgapur & Calcutta and a new industrial complex are under construction to offer modern facilities to the currently existing industries, thereby helping the country's economy.

The chief feature of the industrial belt of Bardhaman is that the byproduct of one is enough for the breeding of some other plants. Hence the industries not only export their items but also meet the domestic requirement

The Asansol industrial belt has grown up with IISCO (Indian Iron & Steel Company) in Kulti-Burnpur (established in 1871) at its core. It was the oldest unit of manufacturing the pig iron & iron casting in India. It is through this industry, India started its export operation abroad in the pre- independence period.

Chittaranjan Locomotive, the Government undertaking is responsible for supplying locomotive parts in all over the country. Various other industries have assisted the development of Chittaranjan Locomotive.

The enormous reserve of minerals mainly coal in the extensive area of Raniganj forms the wide belt of ECL (Eastern Coalfields Ltd.), which supplies the raw materials for the domestic industries and also to the different states all over the country.

Several cottage industries have also grown up in the interior areas, which support the rural community. Making of iron utensils & cutlery, dairy, gold & silver smithy, making of clay utensils and pottery etc are the principal occupation of rustics and also support their daily requirements.

Not only by exporting, the industries here supply raw materials to the domestic plants, for that they do not require importing those; hence a bulk of money is saved which is otherwise required for the import cost.

CLIMATE :

Temperature : Maximum temperature 44°C, Minimum Temperature 5°C. The Meteorological Department has only two observatories, one in Bardhaman and the other in Asansol. The rainfall data are, however, available from eight recording stations. Proximity of the Bay of Bengal and the layout of the surrounding lands are the chief determinants of the climate of the plains of West Bengal and, as such, the climate of Bardhaman district hardly differs from the overall humid mesothermal climatic pattern.

WATER RESOURCES :

The river system in Bardhaman includes the Bhagirathi-Hooghly in the east, the Ajoy and its tributaries in the north and the Dwarakeswar, the Damodar and its branches in the south-west. Besides, there are innumerable old beds of rivers all over the area.

The Damodar : Bardhaman district forms the core of the Damodar Valley region of which 32,113 km. is in Bihar and 26,366 km. in West Bengal. The significance of the Damodar in modern times was first realized in Bardhaman positively by the exploitation of the coal preserved in its rift valley and its use as a railway corridor; negatively by the devastation brought to the district by its frequent floods as a consequence of the convergence of the drainage from the impervious crystallines of the plateaus into the bottle-neck below Asansol, and of the abrupt right-angled bend where the Damodar gives off distributaries. The drainage problem has been much aggravated by deforestation and soil erosion. The Damodar Valley Corporation tackles these problems.

The Damodar or the Deonad Nadi, as it is called in its upper reaches, rises from trap hills at Rajruppa in Ranchi district. It is towards the Bagodar upland that the Damodar and the Barakar converge; hence the two reservoirs of the DVC have been constructed for flood control, irrigation and power; the Maithon on the Barakar and the Panchet Hill on the Damodar. The Panchet dam is situated only 5 km. west and the Maithon dam 13 km. north of the confluence of the Damodar and Barakar. The Nonia, the Singaran, the Tamla and the Kukua are small left bank tributaries draining the southern slopes of the Ajoy-Damodar interfluvium.

On entering alluvial terrain, the Damodar attains its maximum width and has been controlled at Durgapur by a barrage. The older Anderson weir is 19 km. below Durgapur barrage. The barrage is on floating raft type with control gates and is the fountain head of canals on either bank. The river takes a turn to north-east near Khandaghosh and receives its last tributary, the Sali, which deposits a considerable amount of sand and silt into the Damodar.

The Bhagirathi : The legendary king Bhagirath is said to have excavated in about 200 B.C. the Bhagirathi distributary which ultimately receives all the drainage of the district. The Bhagirathi receives upland discharge only for three months (July-September) in a year and the rest of the period it is maintained by the tidal activity which reaches upto Swarupganj 160 nautical miles upstream from the sea.

The Barakar : The Barakar river, named after Barakar town in West Bengal, is the largest Damodar feeder and its catchment area in Bihar is almost half of that of the Damodar. After rising from Ichak, a small town,

seven miles north of Hazaribagh on the low Kodarma plateau, it flows northwards through a fairly steep-sided valley which has been dammed to form the Tilaiya reservoir. Issuing from the Tilaiya lake it meanders south-east following the general slope of the peneplain. Besides the Barsoti from the south, and the Usri from the north, which are its principal tributaries, it receives more than 10 tributaries from the north and 5 from the south. In its lower course it also receives numerous small tributaries issuing from the springs on the Damodar-Barakar interfluvium. The river first touches the Bardhaman district at the Ghatkul mauza (now submerged under the Maithon reservoir) in Salanpur P.S. and then flows along the side of the mouza of Hatinal in P.S. Kulti.

The Ajoy : The Ajoy rises in the Monghyr district of Bihar. The larger tributaries, the Pathro and the Jainti in the Santal Parganas and the Tumuni and the Kunur in the Bardhaman district, join the Ajoy in its right bank.

The Ajoy is a torrential stream and floods quickly. Its actual discharge into the Bhagirathi is very variable and largely influenced by the level of the latter river which, if high, heads back the supply. Formerly, the river was the only route through the dense jungle that once covered this part of Bengal and its importance is evidenced by the line of forts found along its banks. The rapidity of the current and the sudden freshets to which, like other hilly rain-fed streams, it is liable, render navigation hazardous, and there is practically no river borne traffic on it. The road link to Suri from Panagarh is maintained by a bridge at Ilambazar.

The Tamla : The Tamla rises just south of the village of Ukhra (87°15' E & 23°39' N) in P.S. Andal and joins the Damodar off the mauza of Birbhanpur (87°18' E & 23°29' N) in P.S. Durgapur. This stream should properly be called a nullah, she is so insignificant.

The Kukua : The Kukua Khal rises in P.S. Budbud and falls into the Damodar in mauza Amarapur

The Nonia : The river Nonia rises in Salanpur P.S. of the Asansol subdivision. She enters the police station of Barabani near the mauza of Khaerbad and then flows for some distance in an easterly direction till she comes to the mauza of Itapora in Barabani P.S. after which she flows almost due south. The important tributaries of the Nonia are the Punata Khal and the Damodar Nala. The Nonia is a very small stream and does not carry much water even during the rains. After crossing a spot immediately south of Asansol air landing at Kalipahari (87°02' E 23°40' N) south of G. T. Road the Nonia becomes perennial.

The Singaran : The Singaran rises about 3 km. north of Ikra Junction on the Andal Loop Line in P.S. Jamuria. It joins the Damodar near the junction of P.S. of Faridpur and Andal and near the railway station of Waria.

The Kunur : The Kunur takes its rise in mauza Banshgara at an altitude of 120m. immediately to the west of Ichapur (87°16' E & 23°37' N) and flows in a generally south-easterly direction. The Kunur receives 11 tributaries from the south and 4 from the north, all of which are non-perennial but torrential during the rains.

The Tumuni : The Tumuni rises from a place near Haripur (87°12' E & 23°41' N) and flowing east parallel to the Ajoy, receives from the south several small tributaries of which only Itakhola Nala is worth mentioning. The Tumuni is non-perennial and her lower reaches are very much flood prone.

The Khari : The Khari rises in a furrow north of Mankar. Within a mile of its insignificant course the channel takes the form, not of a conduit collecting the waters of adjoining paddy fields but a wide and deep valley which bears all the appearance of having once been the channel of a great river.

The Banka : Banka literally means 'the twisted one'. It has earned this name for its intricate meanders. Similar to the Khari, the Banka also rises in paddy fields just east of Gopalpur (87°35' E & 23°18' N), quite near the Damodar. Another feeder rises near Golgram (87°39' E & 23°22' N) on N.H. 2. They meet in a large swamp called Bhorni Bil (87°30' E & 23°17' N). The river was formerly a spill channel of the Damodar, but the connecting channel was completely silted up.

The Behula and the Gangur : The source of the Behula (north of Rasulpur railway station) is within a kilometer from the point where the Banka changes its direction from east to north-east. These two non-perennial streams have not only been beheaded but their present channels have been sliced off at various points for communication and agricultural purposes. Moreover, there are several abandoned channels parallel to both the rivers which have produced a very complicated drainage pattern.

The Brahmani the Khandesvari and the Karulia Nala : The Brahmani Nala originates from small tanks (87°57' E & 23°30' N) at 24.4 m (80') above sea level in Mangalkot P.S. and flows north-east. Another branch, also called the Brahmani river, rises a little north-west of Shrikhanda and flowing south-west joins the main channel in a flood-prone area west of Nandigram in Katwa P.S.

The Dwaraka or the Babla : The course of the Dwaraka in Bardhaman is only 3 km. It is a perennial stream.

The Kandar Khal and Kandar Nalas : The area in between the Koiva and the Ajoy is drained by the non-perennial Kandar Khal. It appears from the numerous low pockets along the Kandar Nalas and the Kandar Khal that these are artificial drainage channels.

The DVC navigation-cum-irrigation canal, passing through the district, is on the left side of the Damodar and is about 85 miles in length. It connects the coal-mining areas around Raniganj with the Hooghly river at Tribeni in the Hooghly district.

The Kana Damodar, the Kana Nadi and the Eden Canal : We have already seen that at one time the Kana Damodar and the Kana Nadi were the main channels of the Damodar. They now originate in an insignificantly little opening with a sluice gate in the Damodar left-bank embankment north of Jamalpur. Both these streams are fed by the water of the Eden Canal just below Selimabad. These abandoned distributaries have been converted into irrigation channels, and, as the Eden Canal is now connected to the DVC main Canal, adequate supply of water through these two channels is assured. But even then, as the dry season approaches in November, mud banks are thrown across the streams to parcel out the water into a chain of pools. Within Bardhaman the blind rivers are hardly 6 m. wide. The scene of the Kana Nadi in November is that of busy intensive farming. Anxious farmers are seen throwing mud partitions across the stream. Chains of water lifts called dongas work incessantly in double or even triple rows to supply the much needed water to market gardens, spreading on both sides of the stream.

The Gheha : Two small streams, one taking off from Faimpur (88°02'30" E & 23°05' N) and the other from Hsara (88°05' E & 23°07' N), flowing south-east combines in the Hooghly district to form the Gheha Nadi. They are perennial and also connected with the DVC Canal network.

The Dwarakeshwar : The Dwarakeshwar river, flowing south-east through Bankura, serves as the border between Bankura and Hooghly districts from Puinya (87°41'30" E & 23°02' N). About 3 km. downstream from this point the river touches the Bardhaman district at mauza Rautara (87°43' E & 23°00'30" N) in Khandaghosh P.S. and acts as the boundary between Bardhaman and Hooghly district.

Tanks are found all over the district. Within the Damodar Valley region of Bardhaman (excluding Asansol) alone there were 17,311 tanks and the tank-irrigated area was 1,00,000 acres as compared to only 50,100 acres irrigated from other sources. Asansol subdivision does not get any benefit from the major irrigation projects of the district, and mainly depends on tanks. There are several large tanks above local ground level which require improvement as in the Raina and Khandaghosh thanas and also elsewhere, they are in a derelict condition. In the mining belt around Asansol, absence of sandstowing in the mines has resulted in a fall of water table, rendering many tanks dry. Around Raniganj, subsidence of the land has created marshy conditions making the hitherto tank-irrigated areas unsuitable for cultivation. In the eastern parts one finds numerous tanks overgrown with weeds, water hyacinths and filled up with silt. Still, they are the main stay of the highland and double-cropped areas. Water-lifts by the canoes or dongas are used for drawing water from them. The more well-to-do farmers are now using electric pumps.

One traversing the district from west to east will notice big artificial reservoirs, tanks and wells and then canals and swamps and lastly bils and low depressions susceptible to floods. The Durgapur barrage and the Marthon dam have formed two large reservoirs at the south-western and western periphery of the district. The Durgapur barrage is 692.2 m. (2,271') long, formed of 25 bays and 5 under-sluices each of 18.3 m. (60') span. It carries a roadway 7.62 m. (25') wide across the river at 67.8' m. (222.5') i.e. 12.8 m. (42') above the level of the river bed. Burnpur, Raniganj and Durgapur receive their supply of water from this reservoir.

The Marthon dam is a composite structure of concrete and earth. The maximum height of the main earth dam is 49.4 m. and that of the concrete dam about 45 m. above diversion channel and 56.4 m. above the lowest foundation. The underground power station on the left bank is the first of its kind in India. Rupnarayanpur and Chittaranjan now stand on the fringe of this vast reservoir and draws water and hydel power from it. There are numerous artificial reservoirs in the coal mine areas. The most important of them occur along the tributaries of the Nonia Khal and the Singaran Nala.

FLORA & FAUNA :

The forest areas of the district are chiefly situated in the lateritic and red soil high lands of the Damodar-Ajoy interfluvium, i.e. in the Ausgram PS. of the Sadar subdivision and in the Asansol subdivision. In Ausgram PS. the forest areas are interspersed with paddy fields. The Durgapur forests are continued in the Birbhum district beyond the Ajoy while the forest area in the Asansol subdivision forms a part of the forest area of Santal Pargans. Since the second half of the previous century the vegetations of this district are passing under a tremendous change due to burning, grazing, denudation, ruthless exploitation of forests, human invasion and industrialization. Most forest areas were burdened with rights. The tribals have had the right to take free of charges all the forest produce which they might require for their own consumption. They have also the right to graze cattle free of charge in the forests. There is no restriction for taking minor forest produce like fruits, leaves, edible roots etc.

At the tag end of World War II the necessity of reorganizing the forests which was so long uncared for, was felt and accordingly some new circles and divisions were created in 1944. In January 1949 a separate Bardhaman forest division was created under the Southern Circle. Partition of Bengal on 15th August 1947 and abolition of the zamindari system in West Bengal in 1953 were greatly responsible for reorganization of forest administration in the year 1947 and 1954 respectively. The possessions of vested forests were taken by the Forest Department depending on the availability of records in the area. The taking over was peaceful, but some ex-owners, due to loss of personal property, temporarily lost their sense of judgement, created difficulties and did considerable damage to forest by encouraging their ex-tenants to cut trees on any paltry (unauthorized) sum just to spite the Government. However, all these passing phases were smoothed by 1957.

IMPORTANT PLACES :

Curzon Gate

Curzon Gate : The majestic Curzon Gate, now known as Vijay Toran, was erected in 1903 by the king of Bardhaman, Maharaja Bijoy Chand Mahatab in Lord Curzon's honour. The Royal Palace is situated one km from the gate.

108 Shiva Mandirs : In 1789, Rani Bishnukumari ordered 108 Shiva Mandirs to be built in the lines of typical mud huts of Bengal. During Shivratri, a huge fair is held here. Distance from railway station is about four km.

Tomb of Sher Afghan : The Tomb of Sher Afgan, the last of the Afghan jagirdars in Bardhaman, is located at Pir Beharam near Rajbati. Sher Afgan married Nurjahan. He revolted against Mughal Emperor and to control this, Mughal Emperor Jahangir had sent Kutubuddin. Both died at war in 1610 AD and both buried at the burial ground of Pir Baharam.

Golapbag : The Golap Bag, or the Garden of Rose, of Bardhaman, is a favourite tourist haunt. It is the Botanical and Zoological garden established by the King Bijoy Chand Mahatah in 1884. Famous botanist Dalton Hooker came here and listed 128 types of trees.

Golapbag

Ramana Bagan : It is the forest office of Bardhaman sub-division. It is placed at east side of Golapbag. This forest is pointed as sanctuary. This is also called deer park. Deer, tigers, crocodiles, and different kinds of birds make this place beautiful.

M. Saha Planetarium

Meghnad Saha Planetarium : Within the University grounds is the Meghnad Saha Planetarium, built with the help of Japanese government. Although the seating capacity is quite low, it boasts of the latest technology instruments used for the show. It was opened in 1994. Regular shows are conducted here.

Bijoy Bahar : It is placed at the north-west side of Ramana Bagan where the tomb of Maharaj Bijoy Chand is situated. The environment around this place is very cool and peaceful.

Science Center : The Science Center is situated at Golapbag Road near Bardhaman University. It has a science museum and a park. It offers insight into the animal kingdom, the environment, etc.

Kankaleshwari Kalibari : This goddess Chamunda, a beautiful example of sculpture is made of precious black stone with 8 hands. This sculpture was found from the river-bed of Damodor after the devastating flood in 1923.

Science Centre

Sarbamangala Mandir : This temple is situated in Sarbamangala Road. The goddess Sarbamangala is actually goddess Durga. It is made of precious black stone with 18 hands. The goddess was established in 1740 A.D. by the king Kirti Chand. The present temple is erected by King Mahatab Chand.

Kalna : Kalna, is the confluence of the Shakta and the Vaishnava forms of worship and is only 25 km from Nabadwip. Kalna is well-connected by road. 50 km from Bardhaman, 'Ambika Kalna' was the summer residence of the Rajas of Bardhaman. The temples at Kalna are built of bricks with intricate terracotta designs.

Chittaranjan : India's biggest locomotive factory manufacturing modern electric and diesel locomotives is located here. The workshops are open to visitors and tourists on weekdays. Permission has to be obtained from the Administrative office.

Sarbamangala Mandir

Durgapur Project Limited

Durgapur : Popularly known as the "Ruhr of India", the giant steel plant and industrial establishments here have been instrumental in changing the rural face of Durgapur into a vast industrial complex comprising public and private sectors. Situated on the banks of the Damodar river, this well-planned city centers around giant industrial factories like the Durgapur Steel Plant, Thermal Power Station and the Durgapur Barrage.

Joydev : The birth place of the famous Bengali Vaishnava poet Jaidev, this place can be reached by bus and foot or ferry during the monsoons. The annual fair lasting for 10 to 15 days is held here during the first half of January.

Asansol : A well planned industrial town, Asansol is famous for its coal mines.

Jhaugram : Forests of Betel, Kusum, Mahua and Palash can be seen from here.

Hawa Mahal : A place of major tourist attraction situated at Golapbag.

Maithon : Located on the Barakar river, Maithon is set among undulating hills. The damsite, reservoir, Kalyaneswari temple, hydro-electric project, Panchet dam and Churulia are the important places to be seen.
